1 Introduction

This codebook provides the univariate distribution and category labels for the variables in the second version of the 2001 Individual SAR. Notes added to each variable have been largely drawn from the ONS 2001 Definitions Volume and the ONS 2001 Classifications Guide.

Many variables have been derived specifically for the SARs. The details of the derivations and the original variables used can be accessed from the SARs web-site under www.ccsr.ac.uk/sars/resources/derivations.

The Codebook and data

There are five tick box responses to the country of birth question: one each for the four parts of the UK and one for the Republic of Ireland. Where there is no applicable tick box, people were asked to write in the present name of their country of birth. The written responses are coded using the ONS Geography Classification of Countries. Countries are classified in output according to the geographical position rather than politics. For example, the Canary Islands are classified as North Africa rather than Western Europe even though they belong to Spain

2	Protestant and other Christian (Including Christian related)	1.50%
3	Other religions and philosophies	0.01%
4	None	0.08%

This variable is applicable in Northern Ireland only. It identifies a person's current religious group, if any, or the religious group brought up in for people who do not regard themselves as belonging to any religion. The category 'Catholic' includes those respondents who gave their religion as Roman Catholic, Catholic Apostolic Church, Ukrainian Catholic, Greek Catholic, Palmarian Catholic or Catholic. Responses have been categorised as 'Protestant, Other Christian and Christian Related' or 'Other Religions and Philosophies' on the basis of the best available information, although it is acknowledged that the categorisation of some of the smaller religions is open to interpretation.

1.10 country - Country of Usual Residence

<i>Value</i>	<i>Label</i>	<i>Percentage</i>
1	England	83.30%
2	Scotland	8.91%
3	Wales	4.92%

3	Over 0.75 and up to 1	17.14%
4	Over 1 and up to 1.5	3.04%
5	Over 1.5	1.05%

Density is based on the number of residents per room: that is, the number of residents in a household divided by the number of rooms available for to that household. This variable is comparable to the similar variable in the 1991 SARs and is an indicator of overcrowding. It divides household size (excluding students away during termtime) by number of rooms and thus represents the number of residents per room in the household.

A migrant is a person with a different address one year before the Census to that on Census Day. The migrant status for children aged under one in households is determined by the migrant status of their 'next of kin' (defined as in order of preference, mother, father, sibling (with nearest age), other related person, Household Reference Person).

1.13 distwrk0 - Distance to Work (including study in Scotland)

<i>Value</i>	<i>Label</i>	<i>Percentage</i>

9	England Scotland and Wales only : work outside GB but within	0.00%
10	NI only: work outside NI but within UK	0.01%
11	Work outside UK	0.19%

Includes place of study in Scotland. The distance in kilometres of a straight line between the postcode of residence and the postcode of workplace (main job or course of study in Scotland). In England, Wales and NI it is not calculated for people working mainly at or from home, people with no fixed workplace, people working on an offshore installation or people working outside the UK. In Scotland it is not calculated for people working or studying mainly at or from home, people with no fixed place of work or study, people working on an offshore installation or people working or studying Distance is calculated using the length in hectometers of the straight line between the postcode of residence and the workplace address postcode.

All employment questions refer to the main job - the job in which a person usually works the most hours. For 2001, a series of questions were asked to facilitate the derivation of statistics that are compatible with the International Labour Organisation (ILO) definition of economic status. All people who were working in the week before the Census are described as economically active. In addition, the category includes people who were not working but were looking for work and were available to start work within 2 weeks. Full-time students who are economically active are included. Any person who did paid work in the week before the Census, whether as an employee or self-employed, is described as employed or in employment. 'Paid work' includes casual or temporary work, even if only for one hour; being on a government-sponsored training scheme; being away from a job/business ill, on maternity leave, on holiday or temporarily laid off; or doing paid or unpaid work for their own or family business. A person who is looking for work but is not available to start work within 2 weeks is counted as Economically Inactive. Economic Activity questions are only asked of people aged 16 to 74. The distinction between employee and self-employed is determined by the response to the question 'Do (did) you work as an employee or are (were) you self-employed?' It relates to the person's Main job in the week before the Census or, if not working in the week before the Census, their last Main job. The Main job is the job in which a person usually works the most hours. Questions on employment relate to each person's Main job. A person is defined as unemployed if he or she is not in employment, is available to start work in the next 2 weeks and has either looked for work in the last 4 weeks or is waiting to start a new job. This is consistent with the International Labour Office (ILO) standard classification. The question on how many hours a week a person usually works in their Main job is used to derive whether a person is working full-time (31 hours or more a week) or part-time (30 hours or less per week).

A family comprises a group of people consisting of a married or cohabiting couple with or without child(ren), or a lone parent with child(ren). It also includes a married or cohabiting couple with their grandchild(ren) or a lone grandparent with his or her grandchild(ren) where there are no children in the intervening generation in the household. Cohabiting couples include same sex couples. Children in couple families need not belong to both members of the couple. There is no age limit on the term child. For example, a married couple living with their son aged 40 would be classified as a family consisting of a married couple and their child unless the son has a spouse, partner or child living in the household. The type of family is classified according to the characteristics of persons in generation 1 of family excluding any students in a family whose termtime address is 'elsewhere'.

A dependent child is a person aged 0 to 15 in a household (whether or not in a family) or aged 16 to 18 in full-time education and living in a family with his or her parent(s). This is a change from the 1991 definition which was a person aged 0 to 15 in a household or a person aged 16 to 18, never married, in fulltime education and economically inactive. An 'adult' in a household is any person who is not a dependent child.

A household resident is any person who usually lives at the address, or who has no other usual address. For people with more than one address (e.g. Armed Forces personnel, people who work away from home) the usual address is where the person spends the majority of his/her time, unless they have a spouse or partner at another address. In the latter instance, the usual address is where the person's family resides. Students and schoolchildren studying away from the family home are treated as resident at their term-time address.

A migrant is a person with a different address one year before the Census to that on Census Day. The migrant status for children aged under one in households is determined by the migrant status of their 'next of kin' (defined as in order of preference, mother, father, sibling (with nearest age), other related person, Household Reference Person).

The National Statistics Socio-economic Classification (NS-SeC) has been introduced by the Government to replace Social Class based on Occupation (also known as the Registrar General's Social Class) and Socio-Economic Groups (SEG). For more information see the National Statistics website at www.statistics.gov.uk/nsbase/methods.q. Economically active full-time students are coded as 'full-time students'.

2	One room more than required	24.45%
3	Number of rooms equals number required	19.19%

This provides a measure of under occupancy and over crowding. It relates the actual number of rooms to the number of rooms 'required' by the members of the household (based on a relationship between them and their ages). The room requirement is calculated as follows: - a one person household is assumed to require three rooms (two common rooms and a bedroom) - where there are two or more residents it is assumed that they require a minimum of two common rooms plus one bedroom for: i. each couple (as determined by the relationship question) ii. each lone parent iii. any other person aged 16 or over iv. each pair aged 10 to 15 of the same sex v. each pair formed from a remaining person aged 10 to 15 with a child aged under 10 of the same sex vi. each pair of children aged under 10 remaining vii. each remaining person (either aged 10 to 15 or under 10).

4	Provides 50 or more hours care	2.11%

This refers to the provision of unpaid care. It was a new question for 2001 and was asked in all parts of the United Kingdom. A person is a provider of unpaid care if they give any help or support to family members, friends, neighbours or others because of longterm physical or mental health or disability, or problems related to old age. Note that there is no specific reference to whether this care is provided within the household or outside the household. Therefore, no explicit link can be created to infer that an individual providing care is providing it to a person within the household who has poor general health, or a limiting longterm illness, disability or health problem.

In Northern Ireland the question relates to current religion and is in several parts. People are asked if they regard themselves as belonging to any particular religion. Those people who regard themselves as belonging to a religion are asked to provide an answer as to which religion, religious denomination or body they belong to. Those people who do not regard themselves as belonging to any particular religion are classified as belonging to 'No religion'. A supplementary question was included asking those people who do not regard themselves as belonging to any particular religion to answer a question on which religion, religious denomination or body they were brought up in. This information is only used in the derivation of Community Background, and is not included in the Religion variable. Missing answers for the Religion variable are not imputed so the classifications include a 'not stated' category. In the SARs, 'no religion' and 'religion not stated' has been combined.

10	Grandparent	0.01%
11	Other related	0.50%
12	Unrelated	2.38%

This variable refers to the relationship to the Household Reference Person. For a person living alone, that person is the Household Reference Person (HRP). If the household contains only one family (with or without ungrouped individuals) the HRP is the same as the Family Reference Person (FRP). If there is more than one family in the household, the HRP is chosen from among the FRPs using the same criteria as for choosing the FRP (economic activity, then age, then order on the form). If there is no family, the HRP is chosen from the individuals using the same criteria. The Family Reference Person (FRP) is taken to be the lone parent in a lone parent family. In a couple family, the FRP is chosen from the two people in the couple on the basis of their economic activity (in the priority order full-time job, part-time job, unemployed, retired, other). If both people have the same economic activity, the FRP is identified as the elder of the two or, if they are the same age, the first member of the couple on the form.

1843525 valid values. For valid values, mean=, min=1, max=3. The Individual SAR contains 17,930 full-time students who were enumerated at an address that was not their usual term-time residence. For these students there is only individual-level information on age, sex, marital status and FT student status. We recommend that these students are not included in any analyses. They do not form part of the usual residents population base. They should also have been enumerated at their usual term-time residence - and thus will have been eligible for inclusion in the SARs sample - with a fully completed form.
