## CAMS Test File

The CAMS test file is a sub-sample of 298,912 cases from the Individual Controlled Access Microdata Sample from the 2001 Census. Variables have been perturbed to ensure that no sample members can be identified. Perturbation has retained the correct distribution of each variable but the relationships between variables will not give expected results. The test file can therefore be used to develop and test syntax for analyses before going to use the CAMS at ONS. It cannot be used to test exploratory analyses with any reliability, nor will you be able to test statistical procedures which are dependent on distributions. It is *not* suitable for research purposes and has been provided *only* as a dummy dataset for preparing syntax in advance of using the CAMS file.

The protection comes from perturbing multiple variables per person with a high probability of change and by providing no indication of whether a variable value has been perturbed.

The CAMS test file is available under the standard End User Licence.  
<http://academic.sar-data.ccsr.ac.uk/testcams/> as SPSS and STATA files.

### Coverage

The CAMS test file only covers:

- England and Wales
- Individuals in private households.

and excludes:

- Students living away from their parental home
- households of size 6 or more

These limitations do not apply to the full CAMS files. Other differences apply in terms of variable availability. Users should consult the codebook for the full CAMS file prior to applying to use the data or preparing syntax.
